Vision of the Department:

To be a leader amongst engineering institutions in India, offering value based world class education and constantly pursuing excellence

Mission of the Department:

M1: To offer state-of-the-art undergraduate, postgraduate and doctoral programmes

M2: To develop employable and skilled undergraduate to accept the global and societal challenges, while imparting quality education at postgraduate and research level.

M3: To Foster the passion of life-long learning in all facets of employability.

Program Educational Objectives (PEOs)

PEO1. Core Competence: Fundamental and technical knowledge with skills in Robotics & Artificial Intelligence area to enable and empower to solve problems of the modern industrial world.

PEO2. Depth (Research culture): Imbibing a scientific perspective to make a decision of Robotic systems and Artificial Intelligence using Mathematical, Engineering, Computational & Simulation tools.

PEO3. Professionalism: Make acquaint with technical, managerial, and human skills and familiarize with professional issues like ethics and morality, Intellectual property Rights, Constitution of India and Environmental responsibility.

PEO4. Learning Environment: Motivation for entrepreneurship and inculcating a spirit of continuous lifelong learning for a successful professional career.

Program Outcomes**Program Outcomes of Engineering program as per norms (common to all UG/ PG Programme)**

PO1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.

PO2. Problem analysis: Identify, formulate, research literature, and analyses complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

PO4. Conduct investigations of complex problems: The problems: • that cannot be solved by straightforward application of knowledge, theories and techniques applicable to the engineering discipline. • that may not have a unique solution. For example, a design problem can be solved in many ways and lead to multiple possible solutions. • that require consideration of appropriate

constraints/requirements not explicitly given in the problem statement. (like: cost, power requirement, durability, product life, etc.). • which need to be defined (modeled) within appropriate mathematical frame work. • that often require use of modern computational concepts and tools.

PO5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.

PO6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.

PO9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change technological change.

Program Specific Objectives (PSOs)

PSO1 Design and Development: The ability to design and develop the products as per the need of the customers in the field of Mechanical and Allied Engineering Industries.

PSO2 Engineering Analysis and optimization: The ability to analyze and optimize the Mechanical systems/processes using various computational tools.

PSO3 Society: To strengthen Mechanical Engineering graduates who would value professional and ethical responsibilities while solving societal problems

Honors- B. Tech. (Robotics & Artificial Intelligence)

For Honors in Mechanical Engineering, students should select below courses of 20 credits from the pool of electives given below. These selected courses should not be part of mandatory 160 regular credits.

Course Specialization / Track	Program Elective Course-I PEC-I	Program Elective Course-II PEC-II
Robotics	Mobile and Micro Robotics	Autonomous Robotics and Telecherics
AI	Data Analytics	Deep Learning
Mechatronics	Intelligent Manufacturing	Mechatronics System Design
Control Systems	Dynamic Control Systems	Microcontrollers Architecture and Programming

Course Specialization / Track	Program Elective Course-III PEC-III	Program Elective Course-IV PEC-IV
Robotics	Advanced Robotics Programming	Biomedical Robotics
AI	Advanced Artificial Intelligence	Augmented Reality and Virtual Reality
Mechatronics	Micro electromechanical Systems	Advanced Mechatronics
Control Systems	Advanced Control System	Robot Dynamics and Control

Course Specialization / Track	Program Elective Course-V PEC-V	Program Elective Course-VI PEC-VI
Robotics	Agricultural Robotics	Medical Robotics Technology
AI	AI based Agriculture	AI for Medical Applications
Mechatronics	Mechatronics for Agriculture	Mechatronics for Medical Applications
Control Systems	Agricultural Plant & Device Control	Control for Biomedical Instrumentation systems
